I turn complex product requirements into clear, secure and production-ready customer experiences.

CONTRACT PROFILE
10+ years delivering across complex product environments. Rapid onboarding, independent ownership and pragmatic technical leadership for well-defined UK engagements assessed Outside IR35.

CORE EXPERTISE

MARKET-ALIGNED CAPABILITY

Product-led delivery

Discovery, user needs, scope, trade-offs and cross-functional delivery.

Quality & user experience

Automated testing, CI/CD, accessibility, security, performance and cross-browser quality.

Frontend architecture

React, TypeScript, Next.js, React Router, Vite, design systems and API integration.

Cross-stack & platforms

Node.js, Python, Jinja, AWS, Docker, backend-driven validation and release support.

SELECTED PRODUCT DELIVERY

CURRENT ENGAGEMENT

Senior Frontend Engineer @ Nasuni

Jan 2025 - Present

TypeScript / React / React Router / Vite / Storybook / Vitest / Playwright / Python / Jinja / GitHub Actions

- Product modernisation - Established the foundations for incremental modernisation of a legacy React product using TypeScript, Vite, React Router v7, a clearer feature architecture, ESLint, Prettier and automated Storybook deployment.
- Enterprise search - Owned end-to-end frontend delivery of routed search, translating complex requirements into controls, results, inline actions, cursor pagination, relevance sorting, filters, scoped search, highlighting and clear loading states.
- Secure sharing and uploads - Delivered email-recipient and OTP-protected journeys across React, Python services and Jinja, including backend-driven validation, session handling and safer duplicate-file conflict resolution.
- Quality, security and accessibility - Resolved security findings, hardened CI and download handling, upgraded dependencies and expanded Vitest, Playwright and Python/pytest coverage while improving keyboard and cross-browser behaviour.

Product engineering is the thread across the work: understand the problem, shape a maintainable solution, deliver it with the wider team and leave the product safer to change.

Senior Frontend Engineer @ VML (WPP Group) for PVH

Jun 2019 - Jan 2025

Calvin Klein & Tommy Hilfiger / TypeScript / React / Next.js / Node.js / Cypress / Jest / Storybook / Redux / AWS

- Scalable product architecture - Helped decouple a Java monolith into a modern frontend architecture that supported more frequent independent releases across two global brands.
- Design system delivery - Built a white-labelled enterprise component library shared by Calvin Klein and Tommy Hilfiger, improving consistency and reducing duplicated implementation work.
- Customer journeys - Led basket and shipping improvements plus Apple Pay and PayPal Express delivery, using Optimizely feature toggles for controlled market rollouts.
- Engineering quality - Introduced Jest, React Testing Library and Cypress coverage while working across product, design, backend and QA through delivery.

Senior Frontend Engineer @ Jellyfish, London

Jul 2018 - Jun 2019

TypeScript / React / Next.js / Node.js / Cypress / Jest / Storybook / Redux / Docker / Tailwind CSS

- Frontend platform - Owned a React component library and helped replace a jQuery-based architecture with a more scalable product foundation.
- Team enablement - Established coding standards, documentation, automated testing and a consistent Git branching approach; used Docker and Tailwind CSS for consistent delivery and rapid prototypes.

UI/UX Engineer @ Open Health, Marlow

May 2012 - Jul 2018

Sanofi / GSK / Novartis / JavaScript / jQuery / Handlebars / .NET / Umbraco / Sketch

- End-to-end client delivery - Translated stakeholder requirements into responsive digital experiences across design, implementation, client liaison and the full project lifecycle.
- Delivery improvement - Introduced agile practices and moved planning from analogue methods to structured Jira workflows.

CONTRACT DELIVERY VALUE

HOW I ENGAGE

Rapid onboarding

Understand established products and legacy codebases quickly, then deliver scoped improvements safely.

Cross-functional alignment

Work directly with product, design, backend, QA and security while remaining hands-on in delivery.

Ownership to production

Carry work from technical discovery through implementation, automated testing, release support and handover.

Pragmatic modernisation

Improve architecture and delivery confidence incrementally without defaulting to a disruptive rewrite.

EDUCATION

FOUNDATION

Bachelor of Commerce

Mumbai University / 1993 - 1997
